

The else statement

- When the condition is false for the existing if clause, the else block gets executed

```
if (condition) {  
    // code to execute  
} else {  
    // code to execute if condition is false  
}
```

Example

```
var age = 12;  
if (age > 18) {  
    console.log("You are an adult");  
} else {  
    // Condition is false so the else block gets executed  
    console.log("You are not an adult");  
}
```
